PSL/44 VISION REQUIREMENTS – Issue 16

Dated 1st October 2017

Implementation date 1st November 2017

All PCN candidates and holders of PCN certification shall have natural or corrected vision satisfying the following minimum requirement:

PCN will recognise the Tumbling E Chart as a satisfactory near vision test please refer to [BS EN ISO 18490](#) previously [NANDTB 24](#) which has been superseded <http://www.eminspection.co.uk/visiontests/>. (Existing documentation or Tumbling E vision test charts that continue to state [NANDTB/24](#) remain valid but [ISO 18490](#) is the standard that must be adhered to.)

The candidate shall provide documented evidence of satisfactory vision in accordance with the following requirements:

- A. Corrected or uncorrected near-vision acuity shall permit reading a **minimum of Times Roman N4.5 or equivalent letters** (having a vertical height of not more than 1.6 mm – see note 1) at not less than 30 cm.
- B. Colour vision (see note 2) shall be sufficient that the candidate can distinguish contrast between the colours or shades of grey used in the NDT method concerned as specified by the employer [see PSL/44 ANNEX A for employer guidance](#).

Subsequently to certification, the tests of visual acuity shall be carried out at least annually. Records of tests shall be retained by the employer or responsible agency and provided to PCN upon request. Failure to do so will invalidate all PCN certification.

NOTE 1. Laminated hand held vision test charts are available from a number of suppliers, including the Institute of Optometry*. Further information may be obtained from the Certification Services Division of the British Institute of NDT. [*http://www.ioosales.co.uk/html/practice/eye06B.html](http://www.ioosales.co.uk/html/practice/eye06B.html)

NOTE 2. All candidates and holders of PCN certification will be required to have had colour perception assessed by the Ishihara 24 plate test. The test is required every five years. **In the event that a colour perception deficiency, indicated by misreading any of the first 17 plates, is detected during the Ishihara test, a further 'trade test' is to be carried out by the employer to ascertain whether the detected colour perception deficiency affects the individual's ability to perform the NDT for which he is certificated.** This trade test is to be documented and the record of the test made available to BINDT upon request.

In such cases as a new medical issue arises candidates are required to undergo further eye examinations as some medical conditions such as diabetes or a major medical condition can affect both near vision and colour perception.

Forms overleaf may be used to record the results of near vision, colour perception and contrast tests.

BINDT accepts that a *nominated official of an Authorised Qualifying Body, a PCN Level 3 certificate holder or other medical professional, having documented proof of satisfactory training in the administration of the test, and is medically recognised as competent to conduct such tests for candidates and holders of PCN certification.

**nominated officials must provide proof of appropriate training upon request by BINDT.*
