PCN/GEN Appendix D2 Issue 6 Rev B

Further information concerning the content of PCN documents is available from the PCN Scheme Manager at the above address.

CERTIFICATION OF PERSONNEL IN EDDY CURRENT TESTING OF WROUGHT PRODUCTS

ASSOCIATED DOCUMENTS:

- Appendix Z1 to PCN/GEN (examination syllabus compendium)
- Appendix Z2 to PCN/GEN (specimen examination questions compendium)

CONTENTS

1. SCOPE	2
2. EXAMINATION CONTENT	2
3. CERTIFICATION AVAILABLE	3
4. RENEWAL AND RECERTIFICATION	3
5. SUPPLEMENTARY EXAMINATION CONTENT	3
6. GRADING	3
7. REFERENCE LITERATURE	4

The British Institute of Non-Destructive Testing is an accredited certification body offering personnel and quality management systems assessment and certification against criteria set out in international and European standards through the PCN Certification Scheme.

1. SCOPE

This document prescribes the specific requirements and procedures by which personnel may be examined and, if successful, certificated for the eddy current testing of wrought products and in-service wrought non-ferromagnetic tubing. It excludes certification of personnel engaged in the eddy current testing of in-service ferromagnetic tubing. Requirements contained in this document are supplementary to those contained in PCN General Requirements for Certification of Personnel engaged in Non-Destructive Testing.

2. EXAMINATION CONTENT

General information on examination content and time allowed for each written part is described in PCN General Requirements for Certification of Personnel engaged in Non-Destructive Testing. This Appendix amplifies the provisions of that document only where necessary.

2.1 Level 1

Except where exemptions apply (refer to PCN General Requirements), all candidates will be required to attempt an examination comprised of the following parts:

2.1.1 General Theory of the Eddy Current NDT method.

2.1.2 Sector Specific Theory of the application of the Eddy Current NDT method to wrought products.

2.1.3 Sector Specific Practical examination comprised of:

- (i) preparation and calibration of testing equipment for use (this may involve system sensitivity and control checks).
- (ii) surface testing of two variable geometry wrought products.
- (iii) reporting the results in a prescribed manner on proforma report sheets.

The total time allowed for the practical examination is six hours. The minimum pass mark for the practical part is 70% in each sample tested.

2.1.4 There is no PCN certification available at level 1 for the eddy current testing of wrought tubular products.

2.2 Level 2

Except where exemptions apply (refer to PCN General Requirements), all candidates will be required to attempt an examination comprised of the following parts:

2.2.1 General Theory of the Eddy Current NDT method.

2.2.2 Sector Specific Theory of the application of the Eddy Current NDT method to the testing of wrought products, including questions on product technology and associated defects appropriate to the certification sought.

2.2.3 Sector Specific Practical examination comprising:

- (i) preparation and calibration of testing equipment for use (this may involve system sensitivity and control checks).
- (ii) testing 3 samples (selected by the examiner appropriate to the category of certification sought) in accordance with NDT procedures or instructions which will give, where appropriate, sensitivity levels and reporting thresholds.
- (iii) reporting test results in a prescribed manner on proforma report sheets.
- (iv) preparing a detailed NDT instruction (suitable for level 1 personnel to follow) for the testing of one of the above samples to a provided procedure, code, standard or specification.

The total time allowed for the sector specific practical examination is eight hours. The minimum pass mark for the practical part is 70% in each sample tested.

The content of the Sector Specific theory and practical examinations outlined in Clauses 2.1 and 2.2 above will depend on the categories for which certification is sought (see Clause 3). Level 2 candidates may attempt either of categories 3.2.1(s) or 3.2.2(t).

2.3 Level 3

Except where exemptions apply (refer to PCN General Requirements), all candidates will be required to attempt an examination comprising a Basic examination and a Main Method examination. Information on the content and grading of PCN level 3 examinations is provided in PCN General Requirements for Certification of Personnel engaged in Non-Destructive Testing.

Level 3 candidates who do not hold PCN level 2 certification for the eddy current testing of wrought products will be required to successfully complete the examination described in Clause 2.2.3 except clause (iv).

3. CERTIFICATION AVAILABLE

3.1 Level 1 Eddy Current Testing of General Wrought Products (category 's').

3.2 Level 2

3.2.1 Level 2 Eddy Current Testing of General Wrought Products (category 's').

3.2.2 Level 2 Eddy Current Testing of Tubular Wrought Products (category 't').

3.3 Level 3 Eddy Current Testing of Wrought Products.

4. RENEWAL AND RECERTIFICATION

4.1 The general rules for level 1 and level 2 renewal and recertification are fully described in PCN document CP16, and the rules for level 3 recertification are detailed in PCN document CP17.

4.2 Level 1 certificate holders seeking recertification will be required to undertake the practical examination detailed at Clause 2.1.3 above.

4.3 Level 2 certificate holders seeking recertification will be required to undertake the practical examination detailed in Clause 2.2.3 above.

5. SUPPLEMENTARY EXAMINATION CONTENT

Level 2 eddy current testing personnel wishing to extend their certification from level 2 3.2.1 category 's' to level 2 3.2.2 category 't' (or vice versa) will be required to undertake and pass sector specific theory and practical examination for that category.

6. GRADING

General information on the grading of examinations will be as specified in the current edition of PCN General Requirements, and information on the grading of practical examinations is provided in PCN document CP22.

7. REFERENCE LITERATURE

Essential Reading

- ❑ BS EN 1330-5 Terms used in eddy current testing.
- ❑ BS EN 10246-1 Automatic electromagnetic testing of seamless and welded (except submerged arc welded) ferromagnetic steel tubes for verification of leak tightness
- ❑ BS EN 10246-2 Automatic eddy current testing of seamless and welded (except submerged arc welded) austenitic and austenitic-ferritic steel tubes for verification of leak tightness
- ❑ BS EN 10246-3 Automatic testing of steel tubes. Automatic eddy current testing of seamless and welded (except submerged arc welded) steel tubes for the detection of imperfections.
- ❑ BS EN 1971 – Copper and copper alloys. Eddy current test for tubes.
- ❑ ESI 98-15 – Automatic eddy current testing of steel and titanium tubes.

Training Course Notes: PCN requires candidates to have attended an approved course of training. Accredited Training Establishments are required to provide trainees with an up to date set of training course notes. These are considered essential reading.
