Bose N K
Miniaturised computational imaging system design for super-resolution, large field of view and extended depth of field with applications in surveillance, medical imaging, and condition-based maintenance

Bose N K (with Srinivas U and Lee Culver R)
Wavelength diversity based infrared super-resolution and condition-based maintenance

Boulavoin A (see Verkooyen J)

Broach A (with Tormos B, Ruiz S and Olmeda P)
A contribution to the diagnosis of internal combustion engines through rolling block oscillations

Brown C J (with Roberts G W)
Monitoring infrastructure using global navigation satellite systems

Brown K (see Nelson L J)

Buecherl T (see Osterloh K)

Burch S F (see Chapman R K)

Burch S F (with Stow B A)
Computer modelling of the computed radiographic inspection of wall loss flaws in pipes for image simulation and POD prediction

Cardoso S (see Farrel D M)

Caton P (with Mudge P and Balachandran W)
Advances in defect characterisation using long-range ultrasonic testing of pipes

Certo M (see Nardoni D)

Chan F W Y
Reflective fringe pattern technique for non-destructive subsurface flaw detection

Chandra Patranabis D (see Basak D)

Chandra Patranabis D (see Basak D)

Chapman R K (with Burch S F, Collett N J and Fradkin L J)
Ultrasonic inspection of tilted defects using the 'corner effect' - modelling and experimental validation

Chandome V (with Verhagen B)
Development of a procedure for the ultrasonic examination of 9% nickel LNG storage tank welds using phased array technology

Chaston A M (with Edwards C, Evans S L and Helford K M)
Shear wave ultrasonic coupling performance of different adhesives

Cho I-S (see Simon M)

Cochran S (see Triggers S)

Collett N J (see Chapman R K)

Culver R (see Bose N K)

Cumming D R S (see Triger S)

Dadhania M (see Schulz M J)

Dai T (see Soleimani M)

Davis C L (see Papaelias M Ph)

Davis C L (see Edwards R S)

Day C R (see Austin J C)

Deng Qi (see Yang Enhui)

Diamond G (see Pallav P)

Dixon S (see Edwards R S)

Dougherty M S (see Yella S)

Drinkwater B W (see Edwards R S)

Edwards C (see Chaston A M)

Edwards R S (with Holmes C, Fan Y, Papaelias M, Dixon S, Davis C L, Drinkwater B W and Roberts C)
Ultrasonic detection of surface-breaking railhead defects

Eftekharnejad B (with Mba D)
Acoustic emission signals associated with damaged helical gears

Elofqarian M (with Mba D)
Detecting the onset, propagation and location of non-artificial defects in a slow rotating thrust bearing with acoustic emission

Elston G R
Recent experiences using AIRIS as a platform for phased array ultrasonic and remote visual inspections

Erikson B (with Eriksson A and Houghton R)
Final results of the NESC-III non-destructive testing blind round robin trials on dissimilar metal welds

Eriksson A (see Erikson B)

Evans S L (see Chaston A M)

Ewert Uwe (see Osterloh K)

Fairfield C A (see Swan I P)

Fan Y (see Edwards R S)

Farradell M (with Robbins B J, Stallings J, Cardoso S and Bakker W)
Crack growth monitoring on industrial plant using established electrical resistance 'scanner' technology

Findeis D (see Gryzagoridis J)

Fradkin L J (see Chapman R K)

Friedrich M (with Pierce S G, Galbraith W and Hayward G)
Data fusion in automated robotic inspection systems

Frumusu D (with Manolache A)
Condition monitoring of operational overhead line towers using strain gauges

Gachagan A (see McKenna J P)

Galbraith W (see Friedrich M)

Gan T H (see Pallav P)

Gebral W (see Prance R)

Gelman L (with Petrunin I)
Novel optimisation of bicoherence estimation for fatigue monitoring

George N P (see Bagavathiapan S)

de Geus K (see Godsi W C)

Ghose B (with Singh S N)
Digital imaging system for linac X-rays for NDE of case bonded solid rocket motors

Godsi W C (with de Geus K, Swinka-Filho V and da Silva R R)
Volume and surface measurements of flaws in polymeric insulators using X-ray computed tomography

Goebels J (see Müller B R)

Gomez-Lahoz J (see Muñoz-Nieto A)

Gonzalez-Aguilera D (see Muñoz-Nieto A)

Gryzagoridis J (with Findeis D)
Benchmarking shearographic NDT for composites

Gupta N K (see Yella S)

Hanke R (see Hassler U)

Harper M L (see Thompson M)

Harward M (see Müller B R)

Hasenstab A (see Osterloh K)
Tormos B (see Broatch) .................................................................637
Triger S (with Wallace J, Wang L, Cumming D R S, Salient J-F,
Africkh F and Cochran S) ...............................................................74
Tripathi D K (see Saxena N) ...........................................................22
Tumulis O (see Raislitis R) ...............................................................628
Vaidya P R
Advanced controls for X-ray units: do they really help? ..............569
Valussi S (see Austin J C) ...............................................................550
Verhagen B (see Chardome V) .......................................................490
Verkoosjen J (with Boulatavin A)
Sampling phased array - a new technique for ultrasonic 
signal processing and imaging ....................................................153
Vihinkumar S (see Ravindran V R) ..................................................564
Vinney J (see Amali R) .................................................................374
Wallace J (see Triger S) .................................................................74
Wang L (see Triger S) .................................................................74
Wang L (with Wood R and Sun J)
Acoustic emissions from oil lubricated metal on metal sliding contacts .............................................506
Wang Shigang (see Yang Enhui) ....................................................209
Wang W (see Ta D) .....................................................................14
Wang W
Autoregressive model-based diagnostics for gears and bearings ....414
Wang Y (see Ta D) ....................................................................14
Whittle A (see Nageswaran C) .........................................................673
Wood R (see Wang L) .................................................................506
Yang Enhui (with Deng Qi, Mo Jinqiu, Liang Qinghua and Wang Shigang)
An ultrasonic on-line test method for detecting remotely and automatically energised porcelain post insulators in high-voltage substations ..........................................................209
Yarmolenko S (see Schulz M J) .......................................................436
Yella S (with Dougherty M S and Gupta N K)
Data fusion for automating condition monitoring of 
wooden railway sleepers .................................................................356
Yoo S-M (see Simon M) .................................................................320
Young A (see Nelson L J) ..............................................................78
Yun Y (see Schulz M J) .................................................................436
Zhang J (see Moles M) ...............................................................253
Zschepel U (see Osterloh K) ..........................................................307

ACOUSTIC EMISSION METHODS
Detecting the onset, propagation and location of non-artificial defects 
in a slow rotating thrust bearing with acoustic emission, 
by M Efforjani and D Mba ..............................................................264
Acoustic emission signals associated with damaged helical gears, 
by B Efekharnejad and D Mba .........................................................450
Acoustic emissions from oil lubricated metal on metal sliding contacts, 
by L Wang, R Wood and J Sun .......................................................506
Acoustic emission and specific film thickness (λ) for spur gears, 
by R I Baja Hamzah and D Mba ......................................................642

SUBJECT INDEX
AEROSPACE
An investigation to determine the location of fatigue crack initiation 
sites from ultrasonic images of corrosion, 
by E A Birr and L J Nelson ..........................................................493

CONCRETE TESTING
Surface crack detection by flash thermography on concrete surface, 
by F C Sham, Nelson Chen and Liu Long ..................................240

CONDITION MONITORING
On acoustic measurement-based condition monitoring of internal 
combustion engines, 
by A Albarbar, A Röll and A Staur ..............................................30
The dynamic response of the Berwick-upon-Tweed bypass bridge, 
by I P Swan and C A Fairhead .......................................................35
Technical diagnostics and monitoring based on capabilities of 
wavelet transforms and relaxation neural networks, 
by L S Kuravsky and S N Baranov ...............................................127
Novel optimisation of biocoherece estimation for fatigue monitoring, 
by L Gelmans and I Petrunin .........................................................133
Non-linearity and intermodulation phenomena tracking as a method for 
detecting early stages of gear failure, 
by S Radkowski ..........................................................419
Responsive nanomaterials for engineering asset evaluation and 
condition monitoring, 
by M J Schultz, G Mächébaur, J Abot, Y Song, C Jayasinghe, 
N Mallik, V Shanav, M Dhadhani, Y Yun, S Yarmolenko and J Sankar .........436
Condition monitoring of operational overhead line towers using 
strain gauges, 
by D Frausnitz and A Manolache ..................................................695
Autoregressive model-based diagnostics for gears and bearings, 
by W Wang ...........................................................................414
Gas path prognostic analysis for an industrial gas turbine, 
by W Zhang ........................................................................746
A contribution to the diagnosis of internal combustion engines through 
rolling block oscillations, 
by A Broatch, B Tormos, S Raut and P Ohmeda ..................................637

COMPUTED TOMOGRAPHY
High-speed CT imaging for today’s industry, 
by D Schneberk and N Shashishkekar .........................................19
Adaptive filtering for image enhancement and noise reduction in 
computed tomography images, 
by N Saxena, G L Baheti, D K Tripathi, K C Songara, 
L R Meghwal and V L Meena ....................................................22
Application of a single step temporal imaging of magnetic induction 
tomography for metal flow visualisation, 
by M Soleimani, A Adler, T Dai and X J Peyton ..................................25
Computed tomography for analysis of fibre distribution 
in carbon fibre composites, 
by U Hauster, S Schlotzger and R Hanke ......................................312
Synchrotron refraction CT and Synchrotron Bragg 
magnification CT for NDE, 
by B R Müller, A Lange, M Harwardt, M P Hentschel, 
B Ihlerhaus and J Goebel ...............................................................316
Advanced multi-sensor and multi-source industrial 
computed tomography systems, 
by M Simon, J Issacena, C Seillerwein, S-M Yoo and S Cho ...............320
Micro-X-ray computer tomography in archaeology: analyses of a 
Bronze Age sword, 
by M Mdlileger ..........................................................323
Volume and surface measurements of flaws in polymeric insulators using X- 
ray computer tomography, 
by W C Godoi, K de Deus, V Swintko-Filho and R R da Silva ..................554
COMPUTED TOMOGRAPHY continued
Digital radiography-based 3D-CT imaging for the NDE of solid rocket propellant systems,
by V R Ravindran, C Sreekishore and S Vidhibhushan…………………………………………………………564

DATA FUSION
Data fusion in automated robotic inspection systems,
by M Friedman, S G Pierce, W Gallbraith and G Hayward……………………………………………………………………………………………………88

ELECTRICAL METHODS
Depth profiling of defects in stainless steel using electric potential sensors
and a non-contact AC potential drop method,
by R Prance, W Gebriel and C Astorbous……………………………………………………………………………………………………95
Crack growth monitoring on industrial plant using established
electrical resistance ‘scanner’ technology,
by D M Farrell, B J Robbins, J Stallings, S Cardoso and W Bakker………………690

GUIDED WAVES
Estimation of adhesive bond strength in laminated safety glass using
guided mechanical waves: Part I. An energy velocity approach,
by S Huo and H Reis……………………………………………………………………………………………………………………………146
Estimation of adhesive bond strength in laminated safety glass using
guided mechanical waves: Part II. An attenuation approach,
by S Huo and H Reis…………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………………
THERMOGRAPHY
Wavelength diversity based infrared super-resolution and condition-based maintenance,
by N K Bose, U Srinivas and R Lee Culver .................................................................423
Condition monitoring of exhaust system blowers using infrared thermography,
by S Bagavathiappan, T Saravanan, N P George, John Philip, T Jayalakumar and Baldev Rai ..............................512

ULTRASONIC PROBES including ARRAYS
A modular FPGA-based ultrasonic array system for applications including non-destructive testing,
by S Triger, J Wallace, L Wang, D R S Cumming, J-F Saillant, F Afroukh and S Cochran ..........................74
Sampling phased array – a new technique for ultrasonic signal processing and imaging,
by J Verkooyien and A Boulavinov ...........................................................................153
Curved arrays for improved horizontal sizing in small pipe welds,
by M Moles and J Zhang ..................................................................................253
Development of a procedure for the ultrasonic examination of 9% nickel LNG storage tank welds using phased array technology,
by V Chardome and B Verhagen ........................................................................400
Sizing in the phased array technique using diffraction and amplitude displacement,
by D Nardoni, P Nardoni, M Certo and G Nardoni ..................................................574
Immersion transmit-receive longitudinal phased array probe for stainless steel,
by C Nageswaran, C R Bird and A Whittle ..................................................................673
Recent experiences using AIRIS as a platform for phased array ultrasonic and remote visual inspections,
by G R Elston ..................................................................................................685

ULTRASONIC TESTING
Dispersion of guided waves in viscous liquid-filled pipes,
by D Ta, W Wang, J Wang and L H Le ........................................................................14
Ultrasonic detectability of potentially closed cracks from cold-worked holes under loaded conditions,
by L J Nelson, K Brown, A Young, L D Jones and R A Smith ..................................78
An ultrasonic on-line test method for detecting remotely and automatically energised porcelain post insulators in high-voltage substations,
by Xing Enshui, Deng Qi, Mo Jiqing, Liang Qinghua and Wang Shigang ...............209
Longitudinal wave attenuation measurements in ductile cast iron,
by I Sedláti ........................................................................................................623
Shear wave ultrasonic coupling performance of different adhesives,
by A M Chaston, C Edwards, S L Evans and K M Holford ........................................633
Acoustic pulse signal diffraction from different reflectors in an elastic medium,
by D V Petros and A B Rinkevich ...........................................................................216
TOF-FS: a technique for detection and monitoring of wall loss defects in large areas of vessels and pipework,
by S Terpstra, F Hoeve, Z McCann and M Stone ...................................................476

VIBRATION ANALYSIS
Root cause and vibration signal analysis for gearbox condition monitoring,
by W Bartelmus ........................................................................................................195

VISUAL INSPECTION
The development and application of a novel camera system for visual inspection of graphite fuel channels at Magnox nuclear power stations,
by A L Smith and P J Norman .................................................................................668

WELD INSPECTION
Final results of the NESC-III non-destructive testing blind round robin trials on dissimilar metal welds,
by B Eriksson, A Eriksson and R Houghton .............................................................616
Evaluation of the phased array transmit-receive longitudinal and time-of-flight diffraction techniques for inspection of a dissimilar weld,
by C Nageswaran and Colin R Bird ........................................................................678
