Insight, Non-Destructive Testing and Condition Monitoring
incorporating the European Journal of NDT
formerly the British Journal of Non-Destructive Testing

ISSN: 1354-2575

VOLUME 55 2013 – INDEXES

Key to issues

No 1 January ......................................... 1-56
No 2 February ....................................... 57-112
No 3 March .......................................... 113-168
No 4 April ............................................ 169-224
No 5 May ............................................... 225-280
No 6 June .............................................. 281-344
No 7 July .............................................. 345-408
No 8 August ......................................... 409-464
No 9 September .................................... 465-528
No 10 October ....................................... 529-584
No 11 November ................................... 585-648
No 12 December .................................... 649-704

REGULAR FEATURES AND SHORT TITLES

Associate Members ........................................ 56, 112, 168, 224, 280, 344, 408, 464, 528, 584, 648, 704
BINDT Awards ............................................. 65, 121, 510
Comment .................................................. 2, 58, 114, 170, 226, 282, 346, 410, 466, 530, 586, 650
Conference Reports ..................................... 627
NDT 2013 – The 52nd Annual British Conference on NDT
Features
BINDT encourages the professional recognition of technicians through registration .......................... 473
Institute Membership .................................. 60, 175, 350, 468, 590
Institute News .......................................... 175
Institute Notices ...................................... 289
International Diary ..................................... 42, 97, 153, 207, 265, 331, 391, 449, 515, 567, 633, 689
NDT Info .................................................. 47, 100, 156, 212, 269, 334, 396, 453, 518, 572, 637, 693
Newsdesk ............................................... 4, 60, 116, 172, 228, 284, 348, 412, 468, 533, 588, 652
Obituary .................................................. 656
B R Grimberg ............................................. 656
B Murray .................................................. 471
J B Sedgewick ......................................... 175
W A Stewart ............................................ 533
D O Thompson ........................................... 471
Product Showcase ................................... 54, 109, 165, 221, 277, 341, 405, 461, 527, 581, 645, 700
Special Features
Acoustic Emission ...................................... 169, 649
The Aerospace Industry .............................. 465
Computed Tomography ............................... 225
Condition Monitoring .................................. 57, 113, 409, 585
Electromagnetics ........................................ 113
Novel Applications ..................................... 1
Optical and Thermal Methods .......................... 225
Radiography ............................................. 529
The Rail Industry ....................................... 345
Ultrasonics ................................................ 57, 169, 585

AUTHOR INDEX
Addai A (see Hussein S) .................................. 197
Ahmadi H (see Khazaei M) .............................. 323
Alasti A (see Behrad M) .................................. 422
Allende H (see Ramirez F) ............................. 366
Altenhofen A (see Martini C O D) ....................... 123
Arumugam V (see Mohamed Bak K) .................... 35
Arumuthu K (with Ashish M, Saravanan T, Philip John, Rao B P C and Jayakumar T)
Simulation of beam hardening in X-ray tomography and its correction using linearisation and pre-filtering approaches .......................... 540
Arumuthu K (see Saravanan T) .......................... 548
Asadi M (see Behzad M) ................................. 422
Ashish M (see Arumuthu K) ............................. 540

Babu Rao C (see Kasinathan M) ......................... 387
Balachandran W (see Haig A G) ........................ 72
Balaramugan S (with Bhattacharyya T, Guhlae D, Zhou L, Davis C L, Peyton A l and Chandra S)
Prediction of interlaminar pearlite spacing of tyre bead wires after patenting using electromagnetic techniques ............................................. 132
Balasubramaniam K (see Biju N) ....................... 504
Banakar A (see Khazaee M) .............................. 323
Banasiak R (see Ye Z) ...................................... 675
Basak D (with Das B)
Performance evaluation of a bangle rope using two non-destructive testing instruments ................................................. 21
Behnia B (see McGovern M E) ......................... 596
Behnia B (see McGovern M E) ......................... 605
Behzad M (with Ebrahim M, Heydari M, Asadi M and Alasti A)
Experimental investigation on the fault diagnosis of permanent magnet DC electromotors ...................................................... 422
Bhattacharyya T (see Balamurugan S) ................. 132
Biju N (with Ganesan N, Krishnamurthy C V and Balasubramaniam K)
Optimum frequency variations with coil geometry and defects in tone burst eddy current thermography (TBET) ............................................. 504
Bin Xu (with Xiqiang Guan, Hao Zhou and Jianwu Zhang)
Lateral contact forces estimation of locomotive wheelsets using a model-based filter for condition monitoring ........................................ 614
Bin Yan (see Xianchao Wang) ......................... 243
Binghua Cao (see Mengbao Fan) ....................... 561
Bojarczak P
Visual algorithms for automatic detection of squat flaws in railway rails .................................................. 353
Buttlar W G (see McGovern M E) .................... 606
Buttlar W G (see McGovern M E) .................... 605
Cardona-Morales O (with Sierra-Alonso E F and Castellanos-Dominguez G)
Identification of wind turbine natural frequencies using narrow-band decomposition methods ............................................. 433
Castellanos-Dominguez G (see Cardona-Morales O) ..................... 433
Chakraborty R (see Roy D) ............................... 553
Chandra S (see Balamurugan S) ....................... 132
Chang Liu (see Guofeng Wang) ....................... 142
Changying Dang (see Weilei Mu) ................................................................. 535

Fangqin Liu (see Mengbao Fan) ................................................................. 561
Feng Wang (see Xing Zhao) ................................................................. 237
Findeis D (see Gryzagoridis J) ................................................................. 249
Fumin Chen (see Weilei Mu) ................................................................. 535
Galar D (see Tormos B) ................................................................. 84
Ganesan N (see Biju N) ................................................................. 504
Gao Y T (see Leng J C) ................................................................. 498
Gao Zhongyang (see Song Guorong) ................................................................. 253
Gelman L (with Murray B, Patel T H and Thomson A)
Novel decision-making technique for damage diagnosis ....................... 428
Gelman L (with Murray B, Patel T H and Thomson A)
Diagnosis of bearings by novel non-linear non-stationary higher order spectra ................................................................. 438
Gómez Y (see Tormos B) ................................................................. 84
Goncalves O (see Wagner R) ................................................................. 187
Grum J (see Kusić D) ................................................................. 659
Gryzagoridis J (with Oliver G and Findeis D)
Modal frequency versus shearography in detecting and locating voids/delaminations in sandwich composites ................................................................. 249
Guan Jia (see Yu Yating) ................................................................. 487
Gudhæ D (see Balamurugan S) ................................................................. 132
Gui-Yun Tian (see Hua-Ming Lei) ................................................................. 126
Guo Yinghui (see Song Guorong) ................................................................. 253
Guo-Jun Hu (see Xianchao Wang) ................................................................. 243
Guo Feng Wang (with Chang Liu)
Fault diagnosis of rolling element bearings based on complexity measure and \( \nu \) support vector machine ................................................................. 142
Habilahali A (with Safizadeh M S)
Forward to residual stress measurement by using pulsed eddy current technique ................................................................. 492
Haddara M (see Khalifa M) ................................................................. 290
Hai-Feng Zhang (with Zhen Lin Li, Zhong Li Ji and Zhi Qiang Bi)
Intelligent leak level recognition of gas pipeline valve using wavelet packet energy and support vector machine model ................................................................. 670
Haig A G (with Sanderson R M, Mudge P J and Balachandran W)
Macro-fibre composite actuators for the transduction of Lamb and horizontal shear ultrasonic guided waves ................................................................. 72
Haijiang Zhu (with Mengwei Yang, Mingsheng Han and Jian Song)
A varied window imaging algorithm for ultrasound backscatter signals of tissue-mimicking materials ................................................................. 610
Hammond D (see Husin S) ................................................................. 197
Hančič A (see Kusić D) ................................................................. 659
Hanxin Chen (with Yunfei Shang and Kui Sun)
Sequential hypothesis testing for reflected signal recognition of time-of-flight estimation in ultrasonic defect detection ................................................................. 66
Hao Zhou (see Bin Xu) ................................................................. 614
He Cunfu (see Song Guorong) ................................................................. 253
Heydari M (see Behzad M) ................................................................. 422
Hongkui Liu (see Xianchao Wang) ................................................................. 243
Hongquan Jiang (see Weilei Mu) ................................................................. 535
Hort F (see Novák L) ................................................................. 665
Hou R (with Hutson D and Kirk K J)
Development of sputtered AlN thin-film ultrasonic transducers for durable high-temperature applications ................................................................. 302
Hu Wen (see Dai Xin) ................................................................. 29
Hua-Ming Lei (with Gui-Yun Tian)
Broken wire detection in coated steel belts using the magnetic flux leakage method ................................................................. 126
Huanning Cao (see Zhonghui Luo) ................................................................. 24
Hughes P (with Fairhurst D, Sherrington I, Renevier N and Morton G)
Innovative method used to evaluate the effect of power washing on marine concrete – a UK site study ................................................................. 382
Husin S (with Addali A, Hammond D and Mba D)
High-frequency acoustic emission and single gas bubble burst ................................................................. 197
Hutson D (see Hou R) ................................................................. 302
Jadhav C K (see Vijaya Lakshmi M R) ................................................................. 482
Jasinskiene E (with Mažrika L and Tumšys O)
Investigation of ultrasonic inspection of the inner radius of a nozzle ................................................................. 182
Jayakumar T (see Arumugam K) ................................................................. 540
Jayakumar T (see Kasinathan M) ................................................................. 387
Jayakumar T (see Nanekar P P) ................................................................. 387
Jayakumar T (see Sutcliffe M) ................................................................. 316
Jayakumar T (see Saravanan T) ................................................................. 548
Jian Li (with Xianglin Zhan and Shijiu Jin)
An automatic flaw classification method for ultrasonic phased array inspection of pipeline girth welds ................................................................. 308
Jian Song (see Haijiang Zhu) ................................................................. 610
Jianmin Gao (see Weilei Mu) ................................................................. 535
Jianwu Zhang (see Bin Xu) ................................................................. 614
Jicheng Li (see Zhongbing Luo) ......................................................... 24
Jilin Wei (see Xuanbing Qiu) ............................................................. 136
Jing-jing Hu (see Xing Zhao) .............................................................. 237
Jothilakshmi N (see Nanekar P P) ...................................................... 316
Kailichelvan K (see Mohamed Bak K) .............................................. 35
Kasina Nathan M (with Wosniok A, Krebber K, Babr Rao C, Murali N and Jayakumar T)  
Strain-free optical fibre temperature sensor using Brillouin optical time domain analyser ........................................... 387
Krishnamurthy C V (see Biju N) ....................................................... 205
Khandan R (see Ramazani M R) .......................................................... 442
Khazaee M (with Ahmad H, Omid M, Banakar A and Moosavian A)  
Feature-level fusion based on wavelet transform and artificial neural network for fault diagnosis of planetary gearbox using acoustic and vibration signals ............................................................... 323
Kim Ki-Seong (see Mohammed M S) ............................................... 593
Kirk K J (see Hou R) ................................................................. 302
Krebber K (see Kasina Nathan M) ...................................................... 387
Kuan Shen (with Yafang Cai) ............................................................. 504
Li Lin (see Zhongbing Luo) ............................................................. 243
Leng J C (with Xing H Y, Zhou G Q and Gao Y T)  
Dipole modelling of metal magnetic memory for V-notched plates ........................................................................... 498
Li Lin (see Zhongbing Luo) ............................................................. 24
Liu Yanli (see Song Guorong) ............................................................ 253
Lowe M (see Wagner R) ................................................................. 187
Lu Yan (see Song Guorong) ............................................................. 253
Makoto Okuda (see Minoru Aoyagi) ............................................... 10
Martins C O D (with Altenhofen A, Clarke T G R and Reguly A)  
Applying micromagnetic methods for the non-destructive metallurgical characterisation of AISI 4140 steel materials ................................................................. 123
Mazl P (see Nohal L) ................................................................. 665
Mažėika L (see Jasliūnienė E) .......................................................... 182
Mba D (see Husin S) ................................................................. 197
McGovern M E (with Behnia B, Buttler W G and Reis H)  
Characterisation of oxidative ageing in asphalt concrete – Part 1: Ultrasonic velocity and attenuation measurements and acoustic emission response under thermal cooling ................................................................. 596
McGovern M E (with Behnia B, Buttler W G and Reis H)  
Characterisation of oxidative ageing in asphalt concrete – Part 2: Estimation of complex moduli ......................................................... 605
Menghao Fan (with Binghua Cao, Wei Li and Fangjilin Liu)  
The influence of a bobbin probe’s radial offset on eddy current testing of tubes ............................................................... 561
Mengwei Yang (see Haijiang Zhu) ...................................................... 610
Mery D (with Mondragon G, Riffo V and Zaccar I)  
Detection of regular objects in baggage using multiple X-ray views ........................................................................... 16
Mingsheng Han (see Haijiang Zhu) .................................................... 610
Minoru Aoyagi (with Takesumi Hirugari, Takahiro Ueno and Makoto Okuda)  
Observation of container liquid levels by dynamic heat conduction ........................................................................... 10
Mo Jinjia (see Dai Xin) ................................................................. 29
Mohamed Bak K (with Kalichelvan K, Vijayaraghavan G K, Dinesh M and Arumugam V)  
Study on the effect of adhesive thickness of lap joints using acoustic emission and FEA ................................................................. 35
Mohammed M S (with Kim Ki-Seong)  
Application of variant least mean squares adaptive algorithms for filtering material grain noise ......................................................... 593
Mohammed O D (with Ramatalo M)  
Gear tooth crack detection using dynamic response analysis ........................................................................... 417
Mondal A K (see Vijaya Lakshmi M R) .............................................. 482
Mondragon G (see Mery D) ............................................................. 16
Moosavian A (see Khazaee M) .......................................................... 323
Morton G (see Hughes P) .............................................................. 382
Mosey S A (with Charlton P C and Wells I)  
Resolution enhancement of ultrasonic B-mode images ....................... 78
Mudge P J (see Haig A G) .............................................................. 72
Murali N (see Kasina Nathan M) ...................................................... 387
Murray B (see Gelman L) ............................................................... 428
Murray B (see Gelman L) ............................................................... 438
Mohammed O D (with Ramatalo M)  
Simulation studies for optimisation of phased array parameters for examination of roll-joints in pressurised heavy water reactor coolant channels ......................................................... 316
Nokal L (with Hoft F, Dvořáček J and Mazal P)  
An experimental investigation of rolling contact fatigue of steels using acoustic emission method ......................................................... 665
Noroozi S (see Ramazani M R) ....................................................... 442
Nuttens T (see Schotte K) ............................................................... 88

Wei Yu (see Yunsong Zhao) .............................................................. 232
Weikel M (with Jianmin Gao, Hongquan Jiang, Zhao Wang, Fumin Chen and Changhai Deng) Automatic classification approach to weld defects based on PCA and SVM ........................................................................... 535
Wells I (see Mosey S A) .................................................................... 78
Weston M (see Sutcliffe M) ............................................................... 297
Wosniok A (see Kasinathan M) ......................................................... 387
Wright B (see Sutcliffe M) ................................................................. 297
Wright B (see Yan D) ...................................................................... 477
Wu Bin (see Song Guorong) .............................................................. 253
Xianchao Wang (with Hongkui Liu, Bin Yan, Lei Li and Guoen Hu) 3D image reconstruction algorithm for truncated projection data in a half-covered scanning configuration ........................................................................... 243
Xianglin Zhan (see Jian Li) ............................................................... 308
Xiaobing Zou (see Yunsong Zhao) .................................................... 232
Xiaochao Cui (see Xuanbing Qiu) ...................................................... 136
Xiaochao Cui (see Xuanbing Qiu) ...................................................... 24
Xing H Y (see Leng J C) ................................................................... 498
Xing Zhao (with Jing-jing Hu, Tao Yang and Feng Wang) An accelerated RAMLA reconstruction algorithm for X-ray cone-beam CT ........................................................................... 237
Xinpeng Yan (see Zhiwei Guo) .......................................................... 621
Xinpeng Yan (see Zhihong Li) ........................................................... 147
Xiqiang Guan (see Bin Xu) .............................................................. 614
Xuanbing Qiu (with Chao Wei, Xiaochao Cui and Jinlai Wei) Real-time pre-processing of the pulsed eddy current signal from continuous casting slabs ........................................................................... 136
Xueyuan Jin (see Dupeng Chen) ....................................................... 257
Yan D (with Sutcliffe M, Wright B and Cooper I) Ultrasonic imaging of full matrix capture acquired data for carbon fibre-reinforced polymer ........................................................................... 477
Ye Z (with Banasiak R and Soleimani M) Planar array 3D electrical capacitance tomography ........................................................................... 675
Yin Bo (see Dai Xin) .......................................................................... 29
Yu Yating (with Guan Jia) Investigation of signal features of pulsed eddy current testing technique by experiments ........................................................................... 487
Yufang Cai (see Kuan Shen) ............................................................... 360
Fault diagnosis of rolling element bearings based on complexity measure and v support vector machine,
by Guofeng Wang and Chang Lin .........................................................142

Study on data fusion of multi-dimensional sensors for health monitoring of rolling bearings,
by Zhixiong Lu and Xi Peng .................................................................147

Feature-level fusion based on wavelet transform and artificial neural network for fault diagnosis of planetary gearboxes using acoustic and vibration signals,
by M Khazaee, H Ahmadi, M Omidi, A Banakar and A Moosavirad ............323

Gear tooth crack detection using dynamic response analysis,
by O D Mohammed and M Rantala .....................................................417

Experimental investigation on the fault diagnosis of permanent magnet DC electromotors,
by M Belzad, A Ebrahimii, M Heydari, M Asadi and A Alasti .......................422

Novel decision-making technique for damage diagnosis,
by L Gelmán, B Murray, T H Patel and A Thomson .................................428

Identification of wind turbine natural frequencies using narrow-band decomposition methods,
by O Cardona-Morales, E F Sierra-Alonso and G Castellanos-Domínguez ..................433

Diagnosis of bearings by novel non-linear non-stationary higher order spectra,
by L Gelmán, B Murray, T H Patel and A Thomson .................................438

Using artificial neural networks and strain gauges for the determination of static loads on a thin square fully-constrained composite panel subjected to a large central displacement,
by M R Ramučani, S Norości, P Sewell, R Khudan and B Cripps ..................442

Lateral contact forces estimation of locomotive wheelsets using a model-based filter for condition monitoring,
by Bin Xu, Xiqiang Guan, Hao Zhou and Juanwu Zhang .............................614

Condition identification of the cylinder liner-piston ring in a marine diesel engine using bispectral analysis and artificial neural networks,
by Zhixiong Lu, Chengqiang Yuan, Zhixiong Li, Zhongxiao Peng and Xiping Yan ........................................702

Intelligent leak level recognition of gas pipeline valve using wavelet packet energy and support vector machine model,
by HaiFeng Zhang, ZhiLin Li, ZongLi Ji and ZhiQiang Bi ..................................670

ELECTROMAGNETIC METHODS

Performance evaluation of a haulage rope using two non-destructive testing instruments,
by D Bazík and B Das .................................................................21

Quantitative electro-mechanical impedance evaluation of tensile damage to austenitic stainless steel,
by Zhongbing Luo, Li Lin, Huangqing Cao, Jicheng Li and Xinmeng Li ............24

An experimental investigation of rolling contact fatigue of steels using acoustic emission method,
by L Nehal, F Horta, J Dvořáček and P Muzil ........................................665

Computed tomography

Iterative reconstruction algorithm for half-cover dual helical cone-beam computed tomography,
by Yunseong Zho, Xiaohong Zou and Wei Lu ...........................................232

An accelerated RAMLA reconstruction algorithm for X-ray cone-beam CT,
by Xing Zhao, Zong-jing Hu, Tao Yang and Feng Wang .............................237

Planar array 3D electrical capacitance tomography,
by Z Ye, R Banasiak and M Soleiman Musa ..............................................675

Condition monitoring

Monitoring and analysing oil condition to generate maintenance savings: a case study in a CNG engine powered urban transport fleet,
by B Tormos, P Olmedo, Y Gómez and D Mba ............................................84

Subject index

Acoustic emission methods

Study on the effect of adhesive thickness of single lap joints using acoustic emission and FEA,
by K Mohamed Bak, K Kalaitzidou, G K Vijayaraghavan, M Dinesh and V Krummen ....35

High-frequency acoustic emission and single gas bubble burst,
by S Hu, A Addali, D Hammond and D Mba ..............................................197

Acoustic emission behaviour during damage evolution in rolled Al-Zn-Mg alloy and its weld,
by Yong hua Zhou and Y Cing ..............................................................202

Influence of increased injection pressure load on the captured acoustic emission signals and dimensional accuracies of polypropylene test specimens,
by D Kusić, R Svečko, T Kek, A Hančič and J Grum ........................................659

An experimental investigation of rolling contact fatigue of steels using acoustic emission method,
by L Nehal, F Horta, J Dvořáček and P Muzil ............................................665

Computed tomography

Iterative reconstruction algorithm for half-cover dual helical cone-beam computed tomography,
by Yunseong Zho, Xiaohong Zou and Wei Lu ...........................................232

An accelerated RAMLA reconstruction algorithm for X-ray cone-beam CT,
by Xing Zhao, Zong-jing Hu, Tao Yang and Feng Wang .............................237

Planar array 3D electrical capacitance tomography,
by Z Ye, R Banasiak and M Soleiman Musa ..............................................675

Condition monitoring

Monitoring and analysing oil condition to generate maintenance savings: a case study in a CNG engine powered urban transport fleet,
by B Tormos, P Olmedo, Y Gómez and D Mba ............................................84
Comparative study of E-shaped coil and evolution of new methodology for crack detection using eddy current testing,
by D Roy, R Chakraborty and B K Kanshir .......................................................... 453

Interacting effects of clustering defects on FEA signals using FEA,
by Qiang Song ........................................................................................................ 458

The influence of a bobbin probe’s radial offset on eddy current testing of tubes,
by Menghao Fan, Bingshuo Cao, Wei Li and Fangqin Liu ...................................... 661

GENERAL & REVIEWS

Observation of container liquid levels by dynamic heat conduction,
by Minow Aoyagi, Takefumi Hiraizumi, Takahiro Uno and Makoto Okuda ....... 10

Hybrid modelling for leak detection of long-distance gas transport pipelines,
by Wang Junru, Wang Tao and Wang Juncheng .................................................... 372

Innovative method used to evaluate the effect of power washing on marine concrete – a UK site study,
by P Hughes, D Fairhurst, I Sherrington, N Renevier and G Morton .................... 382

Overview of NDT methods applied on an aero engine turbine rotor blade,
by M R Vijaya Lakshmi, A K Mondal, C K Jadhu, B V Ravi Dutta and S Sreedhar .......................................................... 482

IMAGE PROCESSING

3D image reconstruction algorithm for truncated projection data in a half-covered scanning configuration,
by Xiantao Wang, Hongkui Liu, Bin Yan, Le Li and Guoqun Hu ............................. 243

INSPECTION QUALIFICATION AND RELIABILITY

Inspection sampling of pitting corrosion,
by M Khalifa, F Khan and M Haddara .................................................................. 290

OPTICAL METHODS

Modal frequency versus shearography in detecting and locating voids/delaminations in sandwich composites,
by J Gryzagoridis, G Oliver and D Finders ............................................................ 249

Strain-free optical fibre temperature sensor using Brillouin optical time domain analysis,
by M Kasinathan, A Wosniok, K Krebber, C Babu Rao, N Murari and T Jayakumar .......................................................... 387

RADIOGRAPHY including DIGITAL RADIOGRAPHY

Detection of regular objects in baggage using multiple X-ray views,
by D Merry, G Mondragon, V Riffo and T Zuccar ................................................. 16

A novel online defect detection method based on X-ray images of railway castings,
by Kaan Shen and Yafang Cai ............................................................................. 360

Simulation of beam hardening in X-ray tomography and its correction using linearisation and pre-filtering algorithms,
by K Arunmutha, M Ashish, T Saravanan, John Philip, B P C Rao and T Jayakumar .......................................................... 540

Effect of exposure and scattering on signal-to-noise ratio for improved defect sensitivity in X-ray radiography,
by T Saravanan, K Arunmutha, John Philip, B Purva Chandra Rao and T Jayakumar .......................................................... 548

SIGNAL PROCESSING

Visual algorithms for automatic detection of squat flaws in railway rails,
by P Bojarzczuk ...................................................................................................... 353

Detection of flaws in aluminium castings: a comparative study between generative and discriminant approaches,
by F Ramirez and H Allende .............................................................................. 366

Automatic classification approach to weld defects based on PCA and SVM,
by Weilei Mu, Jiannin Gao, Hongquan Jiang, Zhao Wang, Fannin Chen and Changying Dang .......................................................... 635

Application of variant least mean squares adaptive algorithms for illiterate material grain noise,
by M S Mohammed and Kim Ki-Seong ............................................................... 993

STRESS AND STRAIN

Strain gauge measurements of the precast concrete lining of a shield-driven tunnel,
by K Schitte, H De Backer, T Nutens, A De Wulf and P Van Bogaert ................. 88

Forward to residual stress measurement by using pulsed eddy current technique,
by A Habibollahi and M S Safijalali ................................................................... 492

Hot-spot stress determination of tubular arc bridge joints using strain gauges,
by D Stael, H De Backer and P Van Bogaert ...................................................... 681

THERMOGRAPHY AND THERMAL METHODS

Quantitative study of water ingress in pulsed thermography,
by Daoweng Chen, Zhi Zeng, Cunlin Zhang, Xueyuan Jin and Zheng Zhang .......... 257

ULTRASONIC TESTING

Sequential hypothesis testing for reflected signal recognition of time-of-flight estimation in ultrasonic defect detection,
by Hancin Chen, Yunfei Shang and Kui Sun ......................................................... 66

Macro-fibre composite actuators for the transduction of Lamb and horizontal shear ultrasonic guided waves,
by A G Haig, R M Sanderson, P J Mudge and W Balachandran ......................... 72

Resolution enhancement of ultrasonic B-mode images,
by S A Moses, P C Charlton and J Wells .............................................................. 78

Issues to be considered when measuring ultrasonic wave attenuation in austenitic cladding material,
by T Seldis ............................................................................................................ 177

Investigation of ultrasonic inspection of the inner radius of a nozzle,
by E Juslén-Rιe, I Mačeková and O Tuýms ......................................................... 182

Guided wave testing performance studies: comparison with ultrasonic and magnetic flux leakage tests,
by R Wagner, O Goncalves, A Demma and M Lowe ........................................... 187

Development of high precision ultrasonic microscopy measurement system and measurement of the surface wave velocities of (100) silicon wafer,
by Song Guorong, Lu Yan, Guo Zhongyang, Liu Yanni, Guo Yinghui, He Canfu and Wu Bin .......................................................... 253

Full matrix capture with time-efficient auto-focusing of unknown geometry through dual-laved media,
by M Sanceliff, M Weston, P Charlton, K Donne, B Wright and I Cooper ............ 297

Development of spattered AIN thin film ultrasonic transducers for durable high-temperature applications,
by R Hou, D Hassan and K J Kirk ................................................................... 302

An automatic flaw classification method for ultrasonic phased array inspection of pipeline girth welds,
by Jian Li, Xianglin Zhan and Shijiu Jin .............................................................. 308

Simulation studies for optimisation of phased array parameters for examination of roll joints in pressurised heavy water reactor coolant channels,
by P P Nanekar, N Jothilakshmi and T Jayakumar ............................................. 316

Ultrasonic imaging of full matrix capture acquired data for carbon fibre reinforced polymer,
by D Yan, M Sanceliff, B Wright and I Cooper ................................................... 477

Characterisation of oxidative ageing in asphalt concrete – Part 1: Ultrasonic velocity and attenuation measurements and acoustic emission response under thermal cooling,
by M E McGovern, B Belinha, W G Battler and H Reis ..................................... 596

Characterisation of oxidative ageing in asphalt concrete – Part 2: Estimation of complex moduli,
by M E McGovern, B Belinha, W G Battler and H Reis ..................................... 605

A varied window imaging algorithm for ultrasound backscatter signals of tissue-mimicking materials,
by Haijung Zhu, Mengwei Yang, Mingsheng Han and Jian Song ......................... 610
