

The International Society for Condition Monitoring (ISCM): Strategy

Enhancement of the field of condition monitoring (CM) and related areas worldwide through development of scientific-technical understanding of the field, its beneficial application and public understanding. This to be achieved under the following categories:

- **CM for Industry:** support ISCM Corporate members and actively collaborate internationally with industrial companies of all sizes in CM and related areas
- **CM for Science, CM Strategic Scientific-Technical Directions and Specialist Groups:** development and support of new strategic scientific-technical directions inside the ISCM, including prognostics, root cause analysis, maintenance and fusion/integration of CM technologies. Development of ISCM specialist groups covering all areas of CM and related areas
- **CM Education:** support ISCM Liaison members related to higher education, development, support and improvement of international CM education; organization and management internationally of CPD in CM and related areas, including CM seminars/short courses
- **CM Certification:** support internationally CM certification and training
- **CM Conferences:** support of international conferences in CM and related areas, including annual International Condition Monitoring Conferences
- **CM Publications:** development and support internationally of CM publications, including the International Journal of Condition Monitoring; development and support of ISCM online media
- **CM Promotion Internationally:** leadership of CM internationally, including CM public awareness; network creation worldwide with Institutions, Societies, Networks, Trade Associations, Centres of Excellence and publication bodies related to CM and related areas
- **CM Projects/Grant Applications:** support and involvement in international CM projects/grant applications in CM and related areas
